Complete Summary

TITLE

Chronic stable coronary artery disease (CAD): percentage of patients evaluated for both level of activity and anginal symptoms during one or more office visits.

SOURCE(S)

American College of Cardiology, American Heart Association, Physician Consortium for Performance Improvement™. Clinical performance measures: chronic stable coronary artery disease. Tools developed by physicians for physicians. Chicago (IL): American Medical Association (AMA); 2005. 8 p. [18 references]

Process

The validity of measures depends on how they are built. By examining the key building blocks of a measure, you can assess its validity for your purpose. For more information, visit the Measure Validity page.

SECONDARY MEASURE DOMAIN

Does not apply to this measure

Brief Abstract

DESCRIPTION

This measure is used to assess the percentage of patients with chronic stable coronary artery disease (CAD) who were evaluated for both level of activity and anginal symptoms during one or more office visits.

RATIONALE

According to American College of Cardiology/American Heart Association/American College of Physicians-American Society of Internal Medicine (ACC/AHA/ACP-ASIM) and National Heart, Lung, and Blood Institute (NHLBI) guidelines, regular assessment of patients' anginal symptoms and levels of activity is recommended.

PRIMARY CLINICAL COMPONENT

Coronary artery disease (CAD); anginal symptom and level of activity assessment

DENOMINATOR DESCRIPTION

All patients with coronary artery disease (CAD)

NUMERATOR DESCRIPTION

Patients from the denominator evaluated for both level of activity and anginal symptoms during one or more office visits

Evidence Supporting the Measure

EVIDENCE SUPPORTING THE CRITERION OF QUALITY

- A clinical practice guideline or other peer-reviewed synthesis of the clinical evidence
- One or more research studies published in a National Library of Medicine (NLM) indexed, peer-reviewed journal

NATIONAL GUIDELINE CLEARINGHOUSE LINK

- ACC/AHA 2002 guideline update for the management of patients with chronic stable angina: a report of the American College of Cardiology/American Heart Association Task Force on Practice Guidelines (Committee to Update the 1999 Guidelines for the Management of Patients With Chronic Stable Angina).

Evidence Supporting Need for the Measure

NEED FOR THE MEASURE

Variation in quality for the performance measured

EVIDENCE SUPPORTING NEED FOR THE MEASURE

State of Use of the Measure

STATE OF USE

Pilot testing

CURRENT USE

Internal quality improvement

Application of Measure in its Current Use

CARE SETTING

Ambulatory Care
Community Health Care
Managed Care Plans
Physician Group Practices/Clinics
Rural Health Care

PROFESSIONALS RESPONSIBLE FOR HEALTH CARE

Advanced Practice Nurses
Physician Assistants
Physicians

LOWEST LEVEL OF HEALTH CARE DELIVERY ADDRESSED

Individual Clinicians

TARGET POPULATION AGE

Patients of all ages with the diagnosis of chronic stable coronary artery disease (CAD)

TARGET POPULATION GENDER

Either male or female

STRATIFICATION BY VULNERABLE POPULATIONS

Unspecified

Characteristics of the Primary Clinical Component

INCIDENCE/PREVALENCE

- Approximately 13 million Americans are living with coronary artery disease (CAD).
- More than 1 million Americans had a new or recurrent coronary attack in 2001.

EVIDENCE FOR INCIDENCE/PREVALENCE

American Heart Association. Heart disease and stroke statistics - 2003 update. Dallas (TX): American Heart Association; 2002. 46 p.

ASSOCIATION WITH VULNERABLE POPULATIONS

Unspecified

BURDEN OF ILLNESS

- Chronic stable coronary artery disease (CAD) is the leading cause of mortality in the United States, accounting for almost 1 in 5 deaths.
- For individuals with CAD, the risk of another heart attack, stroke, and other serious complications is substantial.

EVIDENCE FOR BURDEN OF ILLNESS

American Heart Association. Heart disease and stroke statistics - 2003 update. Dallas (TX): American Heart Association; 2002. 46 p.

UTILIZATION

Within the past 2 decades, the number of short-stay hospital discharges for individuals with coronary artery disease (CAD) increased by almost 18%.

EVIDENCE FOR UTILIZATION

American Heart Association. Heart disease and stroke statistics - 2003 update. Dallas (TX): American Heart Association; 2002. 46 p.

COSTS

The total annual cost of coronary artery disease (CAD) in the United States is approximately $130 billion.

EVIDENCE FOR COSTS

American Heart Association. Heart disease and stroke statistics - 2003 update. Dallas (TX): American Heart Association; 2002. 46 p.

CASE FINDING

Users of care only

DESCRIPTION OF CASE FINDING

All patients with coronary artery disease (CAD)

DENOMINATOR SAMPLING FRAME

Patients associated with provider

DENOMINATOR INCLUSIONS/EXCLUSIONS

Inclusions
All patients with coronary artery disease (CAD)

Exclusions
None

RELATIONSHIP OF DENOMINATOR TO NUMERATOR

All cases in the denominator are equally eligible to appear in the numerator

DENOMINATOR (INDEX) EVENT

Clinical Condition

DENOMINATOR TIME WINDOW

Time window follows index event

NUMERATOR INCLUSIONS/EXCLUSIONS

Inclusions
Patients from the denominator evaluated for both level of activity and anginal symptoms during one or more office visits

Exclusions
None

MEASURE RESULTS UNDER CONTROL OF HEALTH CARE PROFESSIONALS, ORGANIZATIONS AND/OR POLICYMAKERS

The measure results are somewhat or substantially under the control of the health care professionals, organizations and/or policymakers to whom the measure applies.

ADAPTATION

Measure was not adapted from another source.

RELEASE DATE

2001 Aug

REVISION DATE

2005 Aug

MEASURE STATUS

This is the current release of the measure.

This measure updates a previous version: American College of Cardiology, American Heart Association, Physician Consortium for Performance Improvement. Clinical performance measures. Chronic stable coronary artery disease. Chicago (IL): American Medical Association (AMA); 2003. 8 p.

SOURCE(S)

American College of Cardiology, American Heart Association, Physician Consortium for Performance Improvement™. Clinical performance measures: chronic stable coronary artery disease. Tools developed by physicians for physicians. Chicago (IL): American Medical Association (AMA); 2005. 8 p. [18 references]

MEASURE AVAILABILITY

The individual measure, "Symptom & Activity Assessment," is published in the "Clinical Performance Measures: Chronic Stable Coronary Artery Disease." This document and technical specifications are available in Portable Document Format (PDF) from the American Medical Association (AMA)-convened Physician Consortium for Performance Improvement Web site: www.physicianconsortium.org.

For further information, please contact AMA staff by e-mail at cqi@ama-assn.org.
